Product description

The ALLNET PoE LED lamp has an RJ45 network connectors and can therefore directly be connected to IEEE 802.3af and 802.3at compliant PoE and work. Since the PoE lamp requires minimal 3 watts of energy, the power of PoE network infrastructure is not affected. Also, cause of the extremely low heat generation of the LED, it is trouble-free to use in temperature-sensitive data centers.

Belongs in every tool kit!

The lamp under the name ALL-PWR-LED1 facilitates considerably the work of especially network technicians, so that manufacturers while working on server cabinets can be ensured a perfect and needs-oriented light output. Alternatively a long-lasting and energy-efficient Server Cabinet lighting could be done with multiple lights set up, which proposes fixed lighting systems, saving resources in terms of flexibility and value for money.

The first step to VLC (Visible Light Communication) - Network via light!

In building automation the PoE lamps are already used to light installations to switch quickly and effectively. In the future generation of products of this type, a data communication can be realized by light.
