The ALLNET ALL-SGI8003P-2.5G represents a state-of-the-art 3-port industrial switch that combines impressive performance with outstanding features. This switch features its 1 *10/100/1000/2.5G high performance copper PoE port that supports PoE end devices with up to 90W. Supported PoE technologies include IEEE802.3af/at as well as IEEE802.3bt with a maximum power of 90W. In addition to this powerful PoE port, the switch provides 2 additional 2.5G/1000M SFP ports for optional SFP modules suitable for both copper and fiber connections (see accessories). A DIP switch makes it easy to switch the SFP slots between 2.5GM mode and 1000M mode.

An outstanding feature of the switch is the built-in PoE Auto-Check function, specifically designed to troubleshoot

problems with frozen PoE devices. This intelligent feature automatically detects frozen PD devices and resets the output of the PoE copper port to ensure smooth functionality. This significantly reduces maintenance and keeps the technology operating reliably.

The switch is DIN-rail compatible and is ideal for applications in security networks, video surveillance systems, networking and AP installations. In environments where high network speeds and significant PoE performance are required, such as WIFI6 infrastructures, the switch proves to be a perfect choice.

The scope of delivery includes a manual, a DIN rail clamp and a 5-way Phoenix clamp for power connection. A power supply is not included, but suitable power supplies are available as accessories. With the ALLNET ALL-SGI8003P-2.5G, you are relying on a technologically advanced product that will fit seamlessly into your demanding network requirements.

- ▲ **Attention 1:** This product must be well grounded against lightning, please use better than 20# cable to connect the grounding terminal and ground.
- ▲ **Attention 2:**
3~4 SFP ports 2.5G/1000 working mode: selected by dip switch to 2.5GM or 1000M.
- ▲ **Attention 3:**
POE Auto-check: PoE Auto-check function is open/ closed by dip switch.
The switch always auto detect 1 ports whether frozen, if some ports are frozen, the switch will restart them, but other ports are unaffected.
