Introduction

NanoPi R6C (as "R6C") is a one-for-all high performance platform for edge computing, designed and developed by the FriendlyElec team. It has a 2.5G and a Gbps Ethernet ports. It is based on Rockchip's RK3588S, and has 4GB/8GB LPDDR4x RAM and an optional 32GB eMMC flash. It works with systems such as FriendlyWrt, Android, Debian, Ubuntu etc. It supports GPU and VPU acceleration

R6C is a compact board of 90×62 cm with rich hardware resources. It has a 30-pin GPIO header including general I/O, I2C, I2S, PWM and SPI pins. It has an HDMI output port which can play video steams such as 80×60 fps H.265/VP9, 80×60 km H264 etc. In addition, R6C has a Type C port that supports USB to Serial conversion, which allows developers to conveniently do development and debug issues.

R6C has an M.2 NVMe SSD interface, a USB 3.0 interface and a USB 2.0 interface. It supports popular fast PD charging mode at the USB-C port. When connected to an external hard disk, it can effectively power the hard disk. A customized CNC Aluminium housing is specifically designed and developed for this board.

In summary, R6C is well suited for enterprise customers to develop mini machine vision systems with multiple Ethernet ports and for embedded system hobbyists to explore and implement prototype designs.
