

Simple, Sophisticated EDR Management in a Single, Easy to Navigate Console

VIPRE Security Group understands that many of today's EDR solutions are way too complex for the average business without a large, experienced IT staff. That's why VIPRE EDR is easy to use and resource sensitive - keeping organizations protected yet not overwhelmed with alert fatigue.

VIPRE Endpoint Detection & Response (VIPRE EDR), was designed for small- to medium-sized enterprise businesses and the security professionals who serve them. Providing the tools you need at the time you need them to better protect your organization, VIPRE EDR delivers better detection and the discovery of more anomalous behavior than you receive from stand alone file, process and networking analysis solutions.

The VIPRE EDR console turns threats into intelligence and recommends next steps for security professionals because simply identifying a threat is not enough. VIPRE EDR delivers increased usability to the EDR market without taking away any of the functionality.

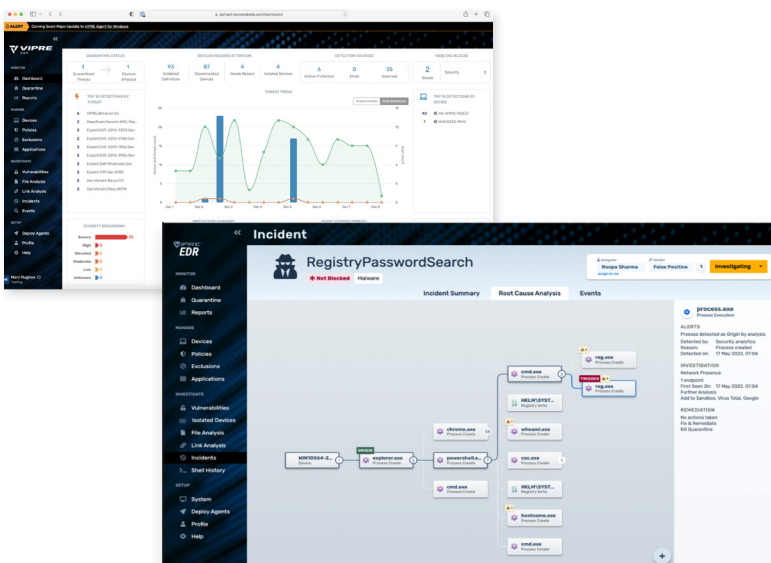

- **Endpoint Protection** - With VIPRE Endpoint Cloud as its core, VIPRE EDR constantly scans files, processes, and network activity for known and unknown threats and instantly alerts you to suspicious behaviors.
- **Correlated Behavior Engine** - Peer deeper into endpoint behavior to track emerging or suspicious activity correlated across all engines. Potential threats will be surfaced to the cloud console with full detailed telemetry of all related activity for further analysis.
- **Endpoint Isolation** - Prevent threat spread by quickly isolating an affected device on the network. Only you will be able to manage and interact with the device until your investigation is complete.
- **Threat Visualization** - Quickly view and address all threat behavior from a central location. Understand how and when a potential threat impacted your systems including all aspects of endpoint activity related to the threat – all user, process, file, registry, and network activity.
- **Remote Shell** - Want an even deeper look at what happened on the endpoint? Click a button and you will instantly have access to the remote device, no special installation required.
- **Built-in Incident Management** - Most attacks will be automatically blocked, and VIPRE EDR incidents will help you visualize, understand, and remediate ongoing attacks as well as harden your environment from future attacks.

Why Choose VIPRE?

VIPRE Security Group puts more than twenty years of advanced security intelligence, cutting-edge machine learning, real-time behavioral analysis, and a comprehensive threat intelligence network to work defending against known and unknown attacks. Our streamlined approach to EDR is suitable for all security professionals providing what you need when you need it.

- **The Best Protection at the Best Price** - VIPRE is consistently ranked in the top tier alongside other market leaders in comprehensive independent tests.
- **Easy to Use** - VIPRE's intuitive solutions make it easier to secure your endpoints from ransomware and other threats.
- **Rapid Deployment** - Admins can deploy VIPRE quickly with minimal disruption to day-to-day activities.
- **Reduced Downtime** - VIPRE enables both speed and security protecting you from malware without slowing down any processes.
- **Award-winning Support** - included with all of our solutions is access to our award-winning, highly-qualified global tech support team with a consistent 90%+ CSAT rating.

VIPRE EDR Benefits

Easy to Install and Use

Advanced functionality combined with simple installation enables you to immediately begin protecting and managing devices across your network.

EDR Built for all Devices Including Desktop and Mobile

VIPRE's Advanced Active Protection uses real-time Ultimate flexibility quickly respond to issues on-the-go, easily work out of hours, or just check in occasionally on your mobile device. VIPRE EDR works across all devices, operating systems and screen sizes to ensure you're always in the know and there are no surprises.

Advanced Ransomware Scanning & Prevention

VIPRE's Advanced Active Protection uses real-time behavior monitoring, artificial intelligence coupled with one of the world's largest threat intelligence clouds to help detect and prevent ransomware.

Underlying Endpoint Protection Platform (EPP) features Next-Generation Antivirus

Proactively identify, alert, investigate and remotely control endpoints to remediate threats.

Complete View of Threat Behavior

Quickly view, investigate and address all threat behavior from a central location to perform rapid remediation.

Malware Remediation and Managed EDR

Post-incident malware remediation assistance is included in our standard support services. Managed EDR with 24/7 monitoring and proactive threat hunting is an optional, reasonably-priced add-on recommended for smaller or resource-constrained IT teams.
